

## **Rose Skin Care Products**

### **Radiance Peel Protocol**

In-office peel treatments to even skin tone and discoloration and to jump start a complete skin rejuvenation process. The AB peel can be performed in combination with a mild facial treatment for a full service procedure. This peel has buffered Glycolic, Lactic, and Malic Acids, otherwise known as Alpha-Hydroxy Acid or Fruit Acids. It is naturally found in sugar cane, sour milk and apples..

AB Peel indications:

- Improves dry skin
- Sun and environmentally damaged skin
- Diminishes age spots
- Reduces oil and acne
- Decreases fine lines and wrinkles

1. Review with patient their skin type, age, previous product usage and if necessary consider performing a patch test to skin for sensitivity.

2. Gently wash face with Green Tea Cleanser, rinse with water and pat dry.

3. Use the pre-peel on gauze to wipe the skin. Dry thoroughly.

4. Pour 1-2 ml of the AB peel in a glass container (dampen dish) and use a Q-tip to apply to the skin using a mild rubbing action. Avoid eye areas, lips, and insides of nostrils.

5. Leave on initially for 4-5 minutes, building up to 7-9 minutes or more as patient tolerance increases. If the client experiences discomfort, you may use a Q-tip (preferably with some peel on it) to rub their skin with it.

6. After reaching the desired time wash off with cold water. You can use the Green tea neutralizer over the skin if necessary. Wash the neutralizer off. NOTE: Should redness or excessive stinging occur, wash off immediately. Pat the skin dry with a clean cotton or tissue. Do not rub the skin with the tissue.

7. Use Complexion Protection SPF35 for anti-aging and UVA & UVB protection as skin is more sensitive to sunlight after performing peel and exfoliation treatments.
